# Harshabrat Bora

+91-882-239-9041 | harshabratbora@gmail.com | linkedin.com//in/harshabrat-bora | github.com/harshabrat

## Education

**Manipal University Jaipur** — Expected May 2028
*Bachelor of Technology in Computer Science (Data Science) (GPA: 8.41 / 10.00)* — *Jaipur, RJ*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Machine Learning, Statistics & Probability

**School Name** — 2020 – 2024
*CBSE Senior Secondary (Class XII: 80%) & Secondary (Class X: 93.2%)* — *City, State*

## Experience

**Cognitive Tech** — June 2026 – August 2026
*AI Engineer Intern* — *Guwahati, Assam*

- Developed and optimized backend microservices using Node.js, Express, and MySQL, improving API response times by 25%, reducing server load by 30%, and decreasing page load times by 15%.
- Collaborated with cross-functional teams to build and deploy React/Redux-based features, contributing to a 20% increase in user engagement during the internship period.

## Projects

**ResearchGPT** | *Python, LangChain, FAISS, Gemini API*

- Developed a Retrieval-Augmented Generation (RAG) system for querying and summarizing scientific research papers using natural language questions.
- Implemented document chunking, embedding generation, and semantic search using Sentence Transformers and FAISS to retrieve relevant context.
- Integrated Gemini API with LangChain to generate source-grounded responses, improving answer relevance and reducing hallucinations.

**VisionCraft AI** | *Python, Stable Diffusion, Diffusers*

- Developed a text-to-image generation model based on Stable Diffusion for synthesizing high-quality images from textual descriptions.
- Implemented and experimented with Hugging Face Diffusers pipelines to understand and deploy latent diffusion models.
- Investigated prompt engineering and diffusion-based image synthesis techniques to improve output relevance and visual quality.

**Customer Churn Prediction System** | *Python, Scikit-learn, Pandas, NumPy*

- Developed a machine learning pipeline to predict customer churn using classification algorithms and feature engineering techniques.
- Performed data preprocessing, exploratory data analysis, and model evaluation using accuracy, precision, recall, and F1-score.
- Achieved strong predictive performance through hyperparameter tuning and cross-validation.

## Technical Skills

**Languages**: Python, Java, SQL, JavaScript, C++, R
**Technologies**: LangChain, Streamlit, FAISS, Sentence Transformers, Hugging Face Diffusers, Gemini API, Scikit-learn, Pandas, NumPy, Matplotlib, React.js, Express.js, Node.js, MySQL, Git, GitHub, Jupyter Notebook
**Concepts**: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Artificial Intelligence, Machine Learning, Generative AI, Retrieval-Augmented Generation (RAG), Prompt Engineering, REST APIs, Statistics & Probability
